Input system:
Dependent variables:x
Independent variables:t

$$\frac{dx}{dt} = bx^2 \text{inv}(N + x)$$

==========

Result:
Dependent variables:s_1, x
Independent variables:t
Additional variables:

$$s_1 = \text{inv}(N + x)$$

$$\frac{dx}{dt} = bx^2 s_1$$

$$\frac{ds_1}{dt} = (-1)s_1^3 bx^2$$
