Input system:
Dependent variables:x
Independent variables:t

$$\frac{dx}{dt} = ax(x - L)\text{inv}(N + x)$$

==========

Result:
Dependent variables:s_1, x
Independent variables:t
Additional variables:

$$s_1 = \text{inv}(N + x)$$

$$\frac{dx}{dt} = s_1 ax^2 + (-1)s_1 axL$$

$$\frac{ds_1}{dt} = (-1)s_1^3 ax^2 + s_1^3 axL$$
