Input system:
Dependent variables:x
Independent variables:t
Equations:

$$\frac{dx}{dt} = ax(x - L)\text{inv}(N + x)$$

==========

Result:
Dependent variables:s_1, x
Independent variables:t
Additional variables:

$$s_1 = \text{inv}(N + x)$$

Equations:

$$\frac{dx}{dt} = s_1 a x^2 + (-1) s_1 a x L$$

$$\frac{ds_1}{dt} = (-1) s_1^3 a x^2 + s_1^3 a x L$$
