Input system:
Dependent variables:x
Independent variables:t
Equations:

$$\frac{dx}{dt} = ax(x - L)(K - x)\text{inv}((N + x)K)$$

==========

Result:
Dependent variables:s_1, x
Independent variables:t
Additional variables:

$$s_1 = \text{inv}((N + x)K)$$

Equations:

$$\frac{dx}{dt} = s_1 K a x^2 + (-1)s_1 K a x L + (-1)s_1 x^3 a + s_1 x^2 a L$$

$$\frac{ds_1}{dt} = (-1)s_1^3 K^2 a x^2 + s_1^3 K^2 a x L + s_1^3 K x^3 a + (-1)s_1^3 K x^2 a L$$
