Input system:
Dependent variables:y, x
Independent variables:t
Equations:

$$\frac{dx}{dt} = ax - bxy\text{inv}((1 + Ax)(1 + By))$$

$$\frac{dy}{dt} = (-1)cy + dxy\text{inv}((1 + Ax)(1 + By))$$

==========

Result:
Dependent variables:s_1, y, x
Independent variables:t
Additional variables:

$$s_1 = \text{inv}((1 + Ax)(1 + By))$$

Equations:

$$\frac{dx}{dt} = (-1)bxys_1 + ax$$

$$\frac{dy}{dt} = dxys_1 + (-1)cy$$

$$\begin{aligned}\frac{ds_1}{dt} = {} & s_1^3By^2Abx + (-1)s_1^3Ax^2Bdy + s_1^3Abxy + (-1)s_1^2ByAax \\ & + (-1)s_1^3Bdxy + s_1^2AxBcy + (-1)s_1^2Aax + s_1^2Bcy\end{aligned}$$
