Input system:
Dependent variables:x
Independent variables:t
Equations:

$$\frac{dx}{dt} = bx^2 \left(K - x\right) \mathrm{inv}\left(K \left(N + x\right)\right)$$

==========

Result:
Dependent variables:s_1, x
Independent variables:t
Additional variables:

$$s_1 = \mathrm{inv}\left(K \left(N + x\right)\right)$$

Equations:

$$\frac{dx}{dt} = s_1 bx^2 K + \left(-1\right) s_1 bx^3$$

$$\frac{ds_1}{dt} = \left(-1\right) s_1^3 K^2 bx^2 + s_1^3 Kbx^3$$
